

# Trailer Towing: Modular Trailing Cart

*MTCs Offer Flexibility for Added Payload Capacity.*

Need more capacity than a Mailmobile® or Packmobile™ offers? Then consider the flexibility offered by Modular Trailing Carts.

Up to six MTCs can be “ganged” behind a Mailmobile or Packmobile, depending on your day’s payload needs.

### *Capacity*

Each MTC can handle a 300-lb. load. The compact square shape suits tight turning requirements, and an MTC is easily maneuvered manually. At 51” high, the MTC includes four 22” by 22” wire shelves adjustable in 1” increments.

### *Turning Radius*

Makes turns from one 56” hallway to another. Minimum doorway width 36”. If hallways do not meet these specifications, contact sales representative for more information.

### *MTC Tow Hitch*

Mounts on the battery door of towing vehicle and has a ring-style adapter for easy connection. Each MTC has a built-in hitch for connecting to other MTCs. No electrical connections are required.

### PHYSICAL CHARACTERISTICS

Overall Dimensions  
MTC

#### Travel

- Not for use on ramps.
- Uneven floor surfaces and thresholds may cause carts to wander.
